Teamwork , Accuracy and Practical

群準科技
Team SoftEx, Inc.

We Team SoftEx Inc. was established in 2008. *Accuracy, practical and reliable* are our philosophy for business management.

Inception, we are focus on distribute computer products, expect with our expertise can solve customers trouble in computer classroom management and personal computer problems. For several years, step by step, gradually we have gained customer's common consensus, expanding market share and scope of services.

We truly believe that "service" is the base to sustain business, no service, no matter how good the product is, still unable to obtain the user's identity.

With accumulated experience, we have developed our own products, and capabilities. We also clearly know the needs of our customers in the long term interaction with customers, it helps us have a better market competitiveness.

In the future, we expect to be a leader in computer management system, be efficient and ready ahead to solve the problems occur in the future, so that system management will become more easily and quickly.

We are proactive and full of energy in business, welcome to learn more about our products and look forward to working with you and grow together.

EVO Cloud
Cloud Management System

Brand new remote control technology

Cloud space management web surfing

EVO Cloud is for user administration function and remote maintenance function,and it is a total solution for the distance problem and networking management,no matter where you are , it would not be a headache for you.
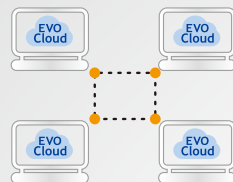

EVO Cloud equipped with hard disk cache technology,reducing the dependency of sourcing from network, when user turned on system at the first time, the data will be written to a user's hard disk,the data is still exists at next re-boot,user does not have to access data from server frequently. Besides, in line with the original disk partition plan, EVO Cloud launched an innovative hard disk caching technology,it can be planned configuration on any hard disk partition,greatly improved the speed of completed a buildup process.

EVO Cloud Management System Product Description

EVO Cloud is based on Client-Server model, when user boot up through the network ,EVO Cloud server will do identity authentication to user.After certifying by EVO Cloud server then it will start up the operating system .

Multi-node management architecture

Using inheritance architecture, through the familiar Windows interface, eliminating the need of repeating install same software and save your valuable time. Complete 100 user settings, just need one second.

File distribution and send messages

Passed experience is that either file dispatch or sending messages shall be done by third party software platform, EVO Cloud integrated all in the same platform to complete all of the task.
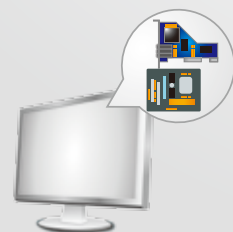

Programme management

EVO Cloud with course management, curriculum can be planned in advance, and can be set in accordance with the schedule system,eliminating user's trouble in operation.
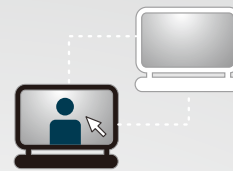

No need to wait for long delivery time

No matter installing software or Windows update, just need to install on one PC,it can be share to all users immediately,it helps your computer working non-stop and can be updated easily.

User off-line protection mechanism

The most updated EVO Cloud off-line protection mechanism provides user surfing smoothly even working under without LAN, no need to reboot.
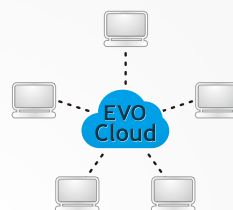

Desktop Roaming

User can randomly select their computer, just log in to their account and password, so they use their own operating environment,the operation will not be limited,even work on cloud environment.

Information security control is the safest

Evo Cloud with a complete information security control function, it can be locked external device and the user's network settings locked to prevent virus invasions and the possibility of information leakage.

Cross-segment management

Previous cross-segment and computer management, tedious modifications rely on the network switch,EVO Cloud has exclusive technology, using our own protocol, no longer need to modify the network switch, cross-segment management that can be perfectly executed.

Load balancing and redundancy mechanism

EVO Cloud software have load balancing and redundancy mechanisms,if the primary server fails, user do not need to reboot, you can integrate to the backup server to continue operation immediately. User can be avoid of operation interruption and file missing.

Support all series of Microsoft operation system and Linux related system.

Desktop data retention

Customize users' needs to define desktop information, without affect to restore function and solved the system management problem caused beyond the classroom.

Before Broadcasting

Traditional computer class appears to be less control and distractions easily happen. It makes difficult for students to concentrate on learning.

All Broadcasting

With combination of audio-visual broadcast from teacher to student, students benefit in accomplishing learning during class time.

Black Screen

Teacher can switch to black screens to bind students' screen so that it's more efficient to convey critical information and lead students to focus on lecture.

Digital Transmission helps you to create an "easy learning" environment.

EVO PURE Support 2560x1080

EVO Pure, the Broadcast System with HD 2560*1080 of digital transmission eliminates the issues of traditional analogue (or VGA) transmission and presents instant and vivid images and clear sound during class.

Hardware Structure

An entire hardware structure includes central control unit, repeater, master unit and student unit; systems connected by a separate CAT6 network cable, without limitation of bandwidth.

Create an easy teaching context

The effect of EVO Pure for instructors is to deliver high quality teaching contents through audio-visual displays during class.That can also help students concentrate on lecture itself without distractions.
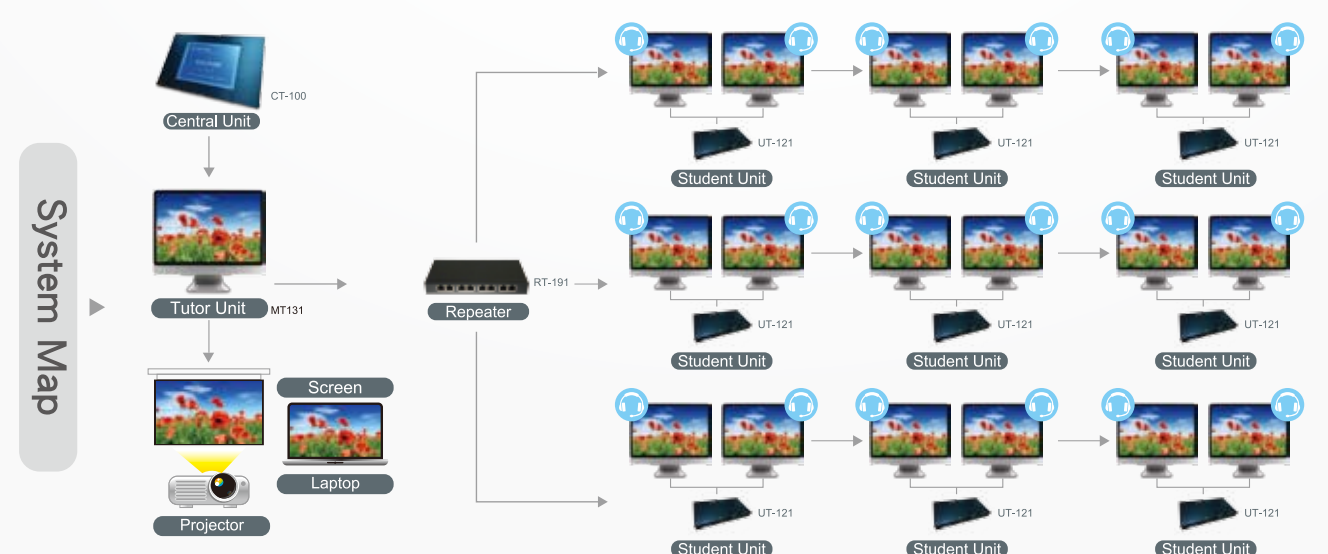

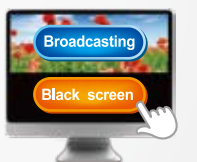

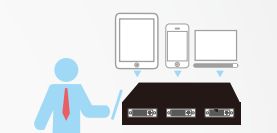

Variety of Teaching Devices Choice

The input sources into master unit include PC, laptop, tablet PC, smart phone and other handheld devices. The multi-source of input enables instructors to implement their tutorial material easily.

Intuitive User's Interface

Intuitive user's interface allows instructors to get used to the convenience of EVO Pure System. Shortcut keys of broadcasting and black screen simplify instructors to control and manage during class.

Broadcasting
Black screen

Applied to all kinds of computer lab

The external box pairs up all class members and applied to different scale of classroom.

Interactive Teaching

Interactive Learning

The tutorial contains (listening/ speaking/ reading/ writing/ translating/ viewing) and a variety of digital textbook can be imported.

Quiz
● Instant Responder / Quiz / Writing True&False/Option questions under all teaching status ,saved the results as electronic files.

Student Demonstration
● Point a presentation student screen operation with sound transmission.

Oral Training
● Students practice speaking can synchronize see the image contents.

Student Watch
● Real-time the student window screen monitor 5 * 5, the highest support at the same time 50 students watch window.

Students Messaging
● Raise hands / Put down hands / text messaging

Recording
● Available for immediate classroom recording/pause/repeat/play/ delete/save as MP3 format.

Student Counseling
● Remote control student's computer.

Lock Control
● Lock the students screen/ keyboard/ shortcuts can not jump out of the system .

Exam Certified

Provided paperless examination environment, and can import video, pictures test papers, the test results can be announced as soon as the test finished.Teacher can carry the test results file with MP3 format. It provides voice marking tool help teacher to scoring easily.

Standardized Tests
● Support test type ABCD imported in multimedia format to browse the test results.

Review
● It is with recording file validation tool,writing review, score amendment.

Oral Test
● The exam classroom meets the foreign language examination requirements.

VIVO
Language Teaching System

Qualified digital language teaching and examination platform

EVO Class
Software Broadcast System

Monitoring	Multimedia broadcasting	Interactive learning	Remote control	File sending	Online exam	Learning management

Multimedia Broadcasting Teaching and Learning

Teacher's screen(full screen/specific area/special program) and voice can be broadcast to student who has logged in.

Remote transfer

Show one student's screen to other students, teacher can remote control this student's computer too.

Pronunciation learning

Voice can be send to all student through microphone or other audio device.

File sending

Send files to student(s) computer's root you want.

Screen recording

Record the process of class teaching as future teaching materials.

Group teaching

The function of screen broadcasting, language boardcasting,online discussion,web camera can be used as group teaching lessons. Teacher can join the group conversation.
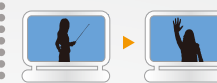

Mix-up audio and video teaching

User can remix audio/video/micro phone sound for listening class.

Remote monitoring

Teacher can watch one or several student's monitor at the same time.

Student demonstration

Teacher assigns a specified student to temporary replace of teacher's place for demonstrate operation by this student, other students can watch the operation only. At this moment, all students will receive demonstration contents from that student .
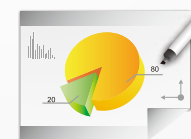

Screen filming

Film your screen action and voice during you are teaching, and save it for other class or user.

Group discuss

You can group students for article, video, image subject for discussion.

On line exam

User can edit a test for student and exam the test by random.User can set score, points, exam time, even can create random quiz.

Hand in report

Student can send file to teacher, makes you manage class's grade easily.

Attendance

Teacher can make sure student's attendance thorugh EVO class's interface.

EVO~SYS~

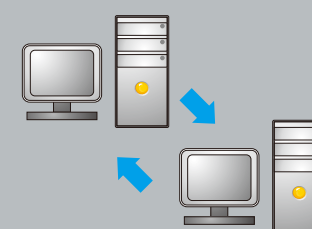

PCI-E

New Generation

Pure hardware structure PCI-E interface
(Support PCI-E X1/X4/X8/X16)

Support instant recovery for all series product of Microsoft Support backup recovery for Linux
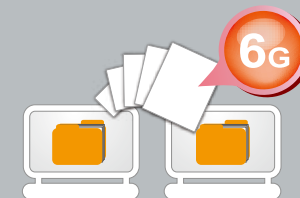

Data migration sending through network
Utilized branded chipset on mainboard support incremental data copy on same or different operating system. Allocated separated computer name & IP for each client PC, ready and applicable on IPv6 environment.

Support 2TB SATA HDD
Centralized control I/O availability in avoid of improper re-boot through USB or DVD device.

斷點 續傳

Support continueously data migration after breakpoint
Continuous processing data migration right after suddenly and unexpected disconnection.

Operating system may continue operate even if hard disk protection system had been removed

6G

Support extremely high speed data migration in network
The transmit speed is up to 6GB per minute, it makes the data deployment easier and faster .

Version 5 is designed with multi-note recovery function.
Needless to re-partitioning and duplicate,hierarchical concept system helps to re-deploy.
